
Calculus is one of the more difficult subjects, mainly due to the complexity of its applications in many fields. A properly taught calculus course should cover all the relevant topics over a four-year period. However, due to time constraints and lack of student motivation, it often does not even get that far. With that said, you might be interested in taking an online calculus course that will put your skills on test without any time or money constraints. The following article will discuss the best online calculus courses out there. 1. Mr.Khan's Awesome Calculus 1 (MACE) - This is one of the best online calculus courses available. All students can take advantage of MACE's full-year support, study materials, and other features. The course can be found here: Mr.Khan's Awesome Calculus 1 (MACE). 2. Khan Academy - This is definitely one of the more popular online calculus courses out there, thanks to its free accessibility and outstanding quality of teaching via videos and quizzes. The course can be found here: Khan Academy Calculus 1 Course . 3. Udacity - This is also known as the 'Kickstart' course of Udacity. The course's quality of teaching is outstanding and it can be accessed here: Udacity Calculus Tutorial . 4. Bloc - This is another popular online calculus courses out there. The course can be found here: Bloc Calculus 1 . 5. Coursera - This is a free online learning site and the college's name is Stanford University, so it won't surprise anyone that their first entry into the market offers some top-notch calculus courses. The course can be found here: Stanford Calculus 1 . Now that you know the best online calculus courses out there, go check them out. You'll be glad you did! Here are some useful calculators that you might need for this course: - Functions and Graphs Calculator - This is a good calculator for graphing functions, because it allows the user to graph more than one function at a time. The graph can be saved in an image file, so it can later be used to display the results of your calculations. The calculator can be found here: Functions and Graphs Calculator . - Rectangle Area Calculator - This calculator computes the area of any rectangle that has sides in decimal form. For example, if one side has decimal form of 5. 25, then the area of that rectangle is 81.25. The calculator can be found here: Rectangle Area Calculator . - Cool Math - This website provides a lot of very cool games and puzzles for mathematics. Here are some interesting games on the website: 1. Grid Game - This game challenges you to change the numbers around in order to get a particular one in the center, which is the objective of the game. 2. Prime Time - This game allows you to test your ability to identify primes by picking them out from a group of other numbers.
